Sustainable Planning and Governance
(A Value Added Course)
offered by
School of Social Science and Humanities (VISH)

Since the industrial revolution humans have immensely impacted the environment and created multiple environmental issues such as global climate change, environmental pollution, loss of forest, and loss of biodiversity which are looming large over our existence. As we depend on a range of natural resources for food and shelter, our choices and activities influence the biophysical world. Our patterns of resource consumption also determine the availability of resources for our current and future generations. Therefore, this value-added course aims to teach the students basic concepts of sustainable development, governance, and sustainable planning to increase their employability in the public service sector. On the one hand, this course traces the evolution of ideas like national government, economic and environmental planning in India; on the other hand, this course provides students the theoretical and practical knowledge that they can apply to create a more sustainable future.

Course Highlights : -

★ Understanding the origin of sustainability concept, the concept of ecological footprint, and tragedy of commons.
★ Trace the evolution of ideas like national government, development and planning in India.
★ An overview of environmental history of India in modern times.
★ Identifying the sources and types of environmental pollution and learning the controlling measures
★ Understanding the value of environmental conservation
★ Explaining the impacts of urbanization on the environment
★ Learning the key principles of green building and challenges to increasing green building activity.
